Non Glyphosate Certified™

Third Party Certification for Glyphosate Free or Non Glyphosate Certified™

Non Glyphosate Certified™: Ensuring Clean, Safe Food with Zero Tolerance

At BioChecked™, we proudly lead the way in fostering transparency and trust within the food supply chain. As the first to introduce the Non Glyphosate Certified™ seal, we've spent the last decade setting the standard for glyphosate-free certification, ensuring that food, animal feed, and other products are free from this systemic herbicide commonly found in genetically engineered crops like corn, soy, canola, cotton, and sugar beets. Our rigorous third-party certification process empowers producers and consumers alike with confidence in clean, safe, and sustainable choices. As we celebrate 10 years of industry leadership, we're excited to continue advancing our mission with innovative solutions for a transparent future.

The Glyphosate Problem: Why It Matters

Genetically engineered crops are designed to survive heavy applications of glyphosate-based herbicides, which kill surrounding weeds but leave the GE crop intact. Unlike topical pesticides that can be washed off, glyphosate is systemic, meaning it's absorbed into every part of the plant—from root to tip. This results in glyphosate residues in the soil, water, and ultimately, the food, animal feed and other products we consume or use. Because glyphosate cannot be removed by washing or processing, choosing glyphosate-free products is critical for health-conscious consumers and producers.

Our Solution: Non Glyphosate Certified™ with Zero Tolerance

BioChecked™ offers a trusted, third-party certification to ensure your products meet the highest standard of purity: **Zero Tolerance*** for glyphosate. Our BioChecked Non Glyphosate Certified™ seal is a mark of quality, transparency, and commitment to a cleaner food supply. Here's how it works:

- **Rigorous Testing Standards:** Products must be tested annually by an **ISO/IEC 17025 accredited laboratory**, the global gold standard for calibration and testing. Testing uses advanced **LC-MS/MS methods** to detect glyphosate residues down to the lowest possible limit of detection (LOD), typically **0.01 parts per million (ppm)**.
- **Zero Tolerance Policy:** To earn our certification, test results must show **no detectable glyphosate residues**. This ensures your product is as clean and safe as possible.
- **Confidential and Secure Process:** BioChecked™ reviews and securely stores each producer's laboratory test results for one year, with renewals as needed. We may also conduct random spot checks to maintain compliance.
- **Trusted Certification:** BioChecked™ holds trademarks for **BioChecked Glyphosate Free Certified™** and **BioChecked Non Glyphosate Certified™**, with the latter as our primary seal on all documentation and certificates.

Why Choose BioChecked™ Certification?

- **Build Consumer Trust:** Our certification assures customers that your products are free from glyphosate, fostering confidence and loyalty.
- **Protect Your Brand:** Stand out in the market with a clear, transparent commitment to health and sustainability.
- **Support a Cleaner Food Supply:** Partner with us to promote a future free from harmful herbicide residues.

How to Get Certified

Ready to certify your products as Non Glyphosate Certified™? It's simple:

1. **Request an Application:** Contact us to receive your certification application, and we'll email it to you promptly.
2. **Submit Test Results:** Provide laboratory results from an ISO/IEC 17025 accredited lab showing no detectable glyphosate residues.
3. **Earn Your Certification:** Once approved, proudly display the Non Glyphosate Certified™ seal on your products.

Join the Movement for Cleaner Food

At BioChecked™, we're more than a certification body—we're your partner in building a healthier, more transparent food system. Like a good neighbor, we're here to support your commitment to quality and trust. Let's work together to ensure every bite is free from glyphosate.

Here is a short list of some of the brands that are already using BioChecked Non Glyphosate Certified seal:

- Atoria's Baking Company
- One Degree Organics
- The Safe + Fair Food Company (New)
- Vibrant Health Products
- Silver Hills Bakery
