**- Laboratory Report -**

**Analysis of Microplastics**

**Project: Microplastics Analysis/ Project 1265/ Wilderness Mountain Water**

Conclusions:

The data obtained during analysis indicates the following:

- No microplastics were detected in the sample submitted.

Procurement of Samples and Analytical Overview:

The sample submitted for analysis arrived at EMSL Analytical on 4/17/2024. The package arrived in satisfactory condition with no evidence of damage to the contents. The data reported herein has been obtained using the following equipment and methodologies.

Methods & Equipment: Polarized Light Microscopy (PLM) – *Zeiss, Universal Petrographic Microscope*  
Reflected Light Microscopy (RLM) – *Nikon, DF Microscope*  
Raman Spectrometry/Microscopy (RM) – *Horiba, XploRA Plus*

Background:

One sample was submitted for analysis. The purpose of the analysis was to determine the microplastic2 concentration.

Figure 1: Sample as received for analysis.

Sample ID	Description	Date/Time Sampled
1265-124	Wilderness Mountain Water	4/17/2024 10:00

Sample Preparation:

See Appendix 1 for sample preparation.

Summary of Results:

Table 1: Summary of microplastics analysis.

Sample ID	Description	Microplastics
1265-124	Wilderness Mountain Water	No Microplastics Detected
NIST Spike <sup>A</sup>	EMSL Lab	NIST traceable polystyrene spheres present within accepted control range
Laboratory Blank <sup>B</sup>	EMSL Lab Water	No Microplastics Detected

Comments: A) NIST traceable polystyrene microsphere control sample prepared by laboratory for QC purposes.  
B) Laboratory prepared particle-free water used during NIST sample preparation, filter rinse and glassware cleaning.  
C) Particles containing high levels of carbon black pigment, including rubber, may not be detected due to the propensity of carbon black to absorb the laser wavelengths.

Sample Preparation:

See Appendix 1 for sample preparation.

Appendix 1: Sample Preparation

Each sample was hand mixed and filtered in order to collect the solid particles. The filter was then dried at ambient temperatures prior to analysis.

Appendix 2: Analysis Calculations

Limit of Detection (LOD): For microscopic analysis the limit of detection is considered to be a single (1) observed particle in the sample portion analyzed.

Limit of Quantitation (LOQ): 
$$LOQ = \frac{\frac{LOD}{(FA \times F)} \times EFA}{SP}$$

Where:

- LOD = Limit of Detection (1)
- FA = Field Area (mm<sup>2</sup>)
- F = Number of Fields Analyzed
- EFA = Effective Filter Area (mm<sup>2</sup>)
- SP = Sample Portion Prepared (gm or ml)  
*Dependent upon solid or liquid sample.*

Descriptions & Definitions:

Microplastics are generally defined as polymeric particles smaller than 5 mm in size in any one dimension, present in waste water, rivers, lakes and oceans. Due to the small size, they may not be easily removed during the waste water filtration processes and can enter the ecosystem, negatively impacting the environment. The common sources of microplastics are: additives in personal care products, synthetic fibers, resin pellets, tire recycling, medical products, abrasion and exfoliating beads used in furniture and insulation, fragments of larger plastic items as they degrade from the effects of ultraviolet rays and other weathering factors. Microplastics can potentially leach toxic chemicals, including endocrine disruption chemicals, such as bisphenol A and phthalates.

None Detected (ND) denotes the absence of analyte in the subsample analyzed. Trace levels of the analyte may be present in the sample below the limit of detection (LOD).

Limit of Detection (LOD): The minimum concentration that can be theoretically achieved for a given analytical procedure in the absence of matrix or sample processing effects. Particle analysis is limited to a single occurrence of an analyte particle in the sub-sample analyzed.

Limit of Quantitation (LOQ): The minimum concentration of an analyte that can be measured within specified limits of precision and accuracy during routine laboratory operating conditions

Important Terms, Conditions, and Limitations:

Sample Retention: Samples analyzed by EMSL will be retained for 60 days after analysis date. Storage beyond this period is available for a fee with written request prior to the initial 30 day period. Samples containing hazardous/toxic substances which require special handling may be returned to the client immediately. EMSL reserves the right to charge a sample disposal or return shipping fee.

Change Orders and Cancellation: All changes in the scope of work or turnaround time requested by the client after sample acceptance must be made in writing and confirmed in writing by EMSL. If requested changes result in a change in cost the client must accept payment responsibility. In the event work is cancelled by a client, EMSL will complete work in progress and invoice for work completed to the point of cancellation notice. EMSL is not responsible for holding times that are exceeded due to such changes.

Warranty: EMSL warrants to its clients that all services provided hereunder shall be performed in accordance with established and recognized analytical testing procedures, when available. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied. EMSL disclaims any other warranties, express or implied, including a warranty of fitness for particular purpose and warranty of merchantability.

Limits of Liability: In no event shall EMSL be liable for indirect, special, consequential, or incidental damages, including, but not limited to, damages for loss of profit or goodwill regardless of the negligence (either sole or concurrent) of EMSL and whether EMSL has been informed of the possibility of such damages, arising out of or in connection with EMSL's services thereunder or the delivery, use, reliance upon or interpretation of test results by client or any third party. We accept no legal responsibility for the purposes for which the client uses the test results. EMSL will not be held responsible for the improper selection of sampling devices even if we supply the device to the user. The user of the sampling device has the sole responsibility to select the proper sampler and sampling conditions to ensure that a valid sample is taken for analysis. Any resampling performed will be at the sole discretion of EMSL, the cost of which shall be limited to the reasonable value of the original sample delivery group (SDG) samples. In no event shall EMSL be liable to a client or any third party, whether based upon theories of tort, contract or any other legal or equitable theory, in excess of the amount paid to EMSL by client thereunder.

The data and other information contained in this report, as well as any accompanying documents, represent only the samples analyzed. They are reported upon the condition that they are not to be reproduced wholly or in part for advertising or other purposes without the written approval from the laboratory.
